MasterConsole® Digital KVM switch (MCD) Overview:

The MasterConsole® Digital KVM switch (MCD) is ideal for small to midsized businesses (SMB) who need to have a centralized point of access to multiple servers without the expense and clutter of a dedicated keyboard, mouse, and monitor for each computer or server. The MCD supports the highest HD video resolution of up to 1920x1080 via standard Category 5/6/6e cabling.

Release Overview:

In some cases of MCD tiering configuration, the USB signal in between the base tier MCD KVM switch and second tier one may not be communicated properly. To fix this issue, Raritan will release new firmware for MDCIMs and MDUTP cables to enhance the USB communication and improve its compatibility.
